LOCKERS AND SEATING

ABS plastic lockers are a relatively new addition to the range, designed specifically for wet areas.

The components are limited to plastics (body and door) and stainless steel (hinges) therefore these lockers are ideal for any environment that is subject to constant wetness, occasional water or high humidity.

Aquatic centres, change rooms, resort pools, commercial kitchens and industry are some applications that can benefit from a locker of this kind.

The lockers can literally be hosed or wiped, ensuring hygiene standards are kept high.

ABS lockers are ideal for zones with very high or variable humidity that have never been fully catered to by steel or timber lockers.

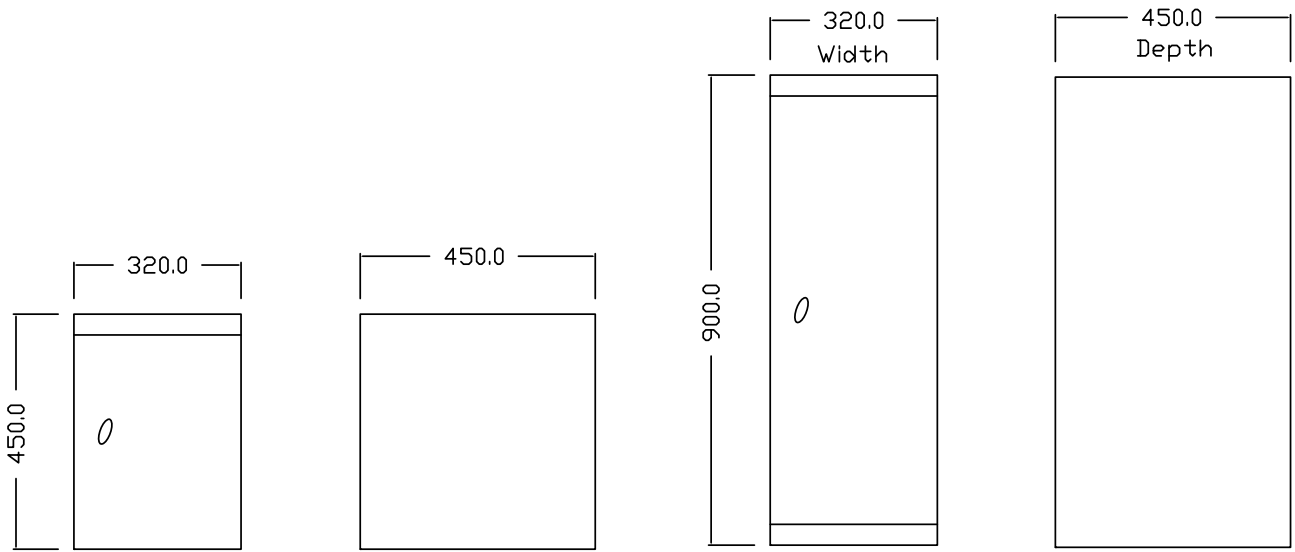

For optimum flexibility, lockers are available in individual units. They are conveniently stackable, with four being the most commonly selected combination. Lower stacked units, such as two or three tiers, can be used as countertops, ledges, or suit perimeter window locations.

Other configurations are also available.

At present the plastic lockers are available in a neutral grey carcass with a light blue door. Lockers can be numbered and feature a durable barrel lock and key, padlock receptor or coin return lock function.
