## LOCKERS AND SEATING

Locking options

Interloc offer a range of locking options to suit every application and budget. From the simple to elaborate, we can cater to your specific needs and environment.

### Padlock receptors

A simple padlock can be used to secure the locker door. This is a tried and tested basic solution for single user applications such as education, offices and some gyms or clubs.

### Barrel locks

Simple locks with keyed entry, perfect for moderate security in most typical installations with multiple users or large combinations. All barrel locks include two keys, with master keys and barrel removal devices are available on request.

### Coin (return)

Coins or tokens are inserted into a secure mechanism, releasing the key to the user. Upon completion of use, the key is retained in the lock and the coin returned to the user. This works very well for public area usage.

### Coin (retain)

This system operates as per the "return" option but does not return the coin. The coin is retained, collected in a secure money bin for owner collection. This "user pays" system is gaining popularity.

### Digital keypad locks

The first reliable and proven keyless entry solution for lockers, the digital lock is operated by any 4-digit code. Self-contained, the lock is powered by 4 x AA batteries (with an average life cycle of a year or 7000 operations).

### Combination padlock

We can provide you, for resale, a quality combination lock to use with receptors.

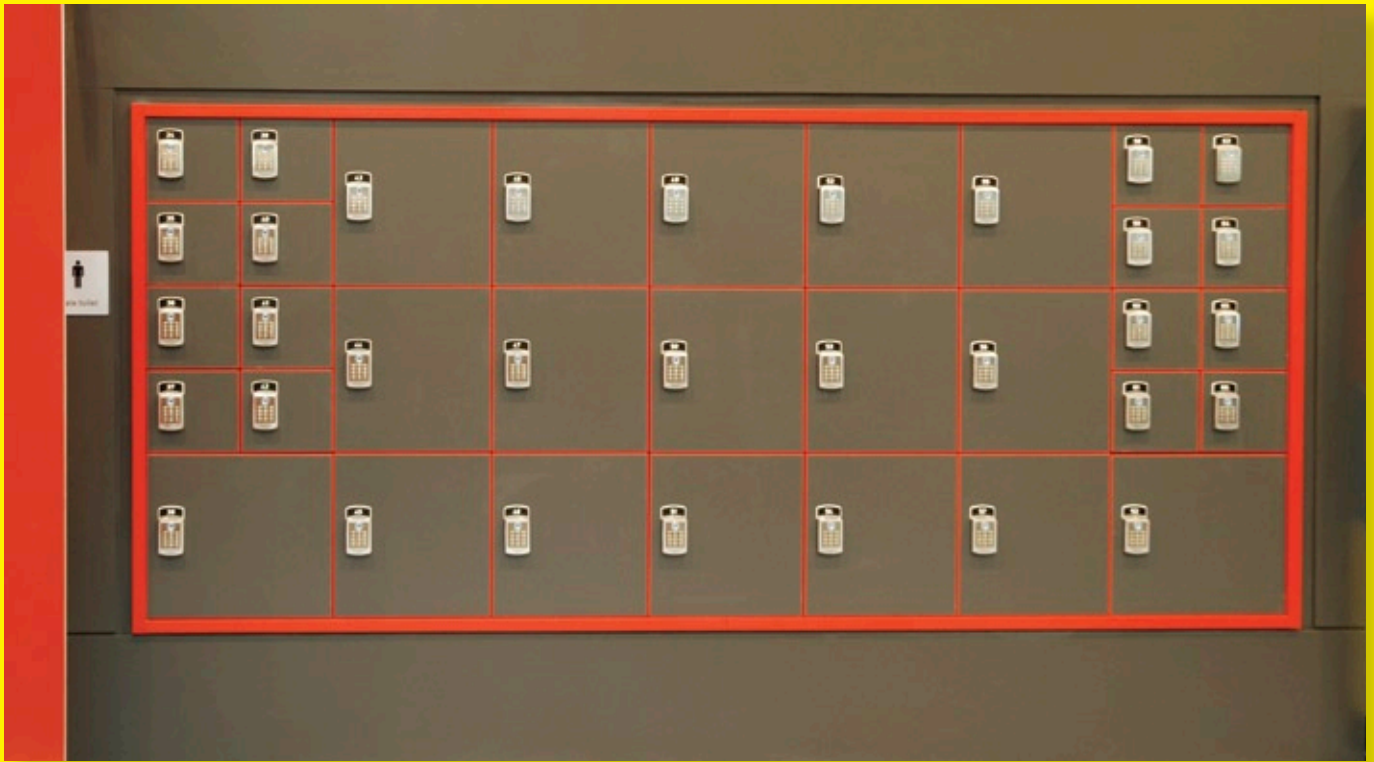

*Interloc assist with simple signage and graphics to ensure easy use and we provide user training for the more sophisticated models. At all times, we are on hand to help with your queries.*

**Security and style can be found within any of the Interloc locker products.**
