LOCKERS AND SEATING

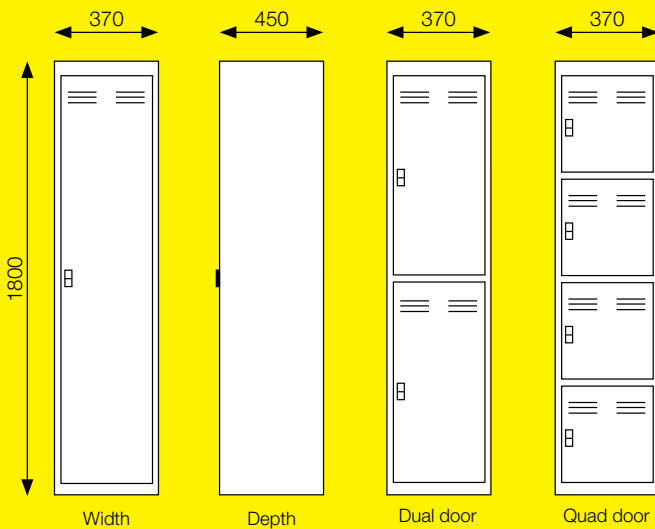

Steel lockers

The most economical locker in our range is the powdercoated steel locker, designed for heavy duty use or budget installations. It is available in two versions – the standard locker or the rental locker.

Standard

The standard locker is available in one standard height, being 1800mm. There are three door combinations of single door, double door or quad door, allowing for a variety of uses. Each steel locker is freestanding for maximum flexibility, but can be fitted side-by-side (ganged) in any quantity or combination, as the footprint of the units are identical.

Steel lockers are installed directly on the floor surface, but can be optionally fitted upon adjustable plinths if the site floor is very irregular. All locker doors feature ventilation slots for aeration and have secure, rigid internals. All units are available with either standard barrel locking (with master key) or with a padlock receptor.

steel lockers

Rental

The rental locker is a recent addition to the range, allowing purchasers to seek a return on their investment. The lockers are available in two models, with the overall footprint of the models identical, hence allowing compatibility between units if so required.

The units come with either four or six compartments and each compartment door has an auto-return hinge, plus a spring loaded lock bolt, ensuring the key can never be removed unless the door is firmly locked.

With a modern design appeal, the lockers have an integrated, adjustable plinth. Within this plinth is a secure, locked coin collecting box, easily accessible by the purchaser.

Labeling and operating instructions can be supplied upon request.
